

II SIMPOSIUM **BIONER XPERIENCE**

25 th Saturday
10:15h - 11:00h

Prof.Dr. Mariano del Canto

Natural Bone Regeneration From alveolar preservation to regeneration of the bony crest.

Abstract:

Natural Bone Regeneration From alveolar preservation to regeneration of the bony crest.

The bone deficit of the alveolar crest that occurs after the tooth loss is a determining factor in the performance of aesthetic and functional implantological rehabilitations.

Numerous studies are currently under way on the suitability of various substitution materials that attempt to compensate for these bone deficits.

We present our work philosophy to the bone deficit, from alveolar preservation to crystal regeneration, always looking for:

- Regulatory effect of osteoblast growth and function.
- Angiogenesis induction.
- Induction of osteogenesis

Curriculum Vitae:

- Doctor en Medicina y Cirugía, especialista en Estomatología y Magister en Cirugía Bucofacial.
- Docente y Director de programas postgraduados en Cirugía Bucal, Implantología y Periodoncia desde 1990 en diferentes Universidades Españolas y ponente Nacional e Internacional.
- Director del máster de Cirugía Bucal, Implantología y Periodoncia de la Universidad de León.
